

Computer system overview: Basic element, evolution of microprocessor. WS 1.1-1.2 (pg.29-32)

Instruction execution, Interrupt. WS 1.3-1.4(pg.32-45)

Memory Hierarchy, Cache Memory DMA, Multiprocessor and Multicore Organization. WS 1.5-1.8 (pg. 46-57)

Operating System objective and functions, Evolution of Operating System, Major Achievement. WS 2.1-2.3 (pg.69-91)

Development Leading to Modern Operating System, Fault Tolerance, OS Design Considerations for Multiprocessor and Multicore. WS 2.4-2.6 (pg.92-100)

Overview of Microsoft Window, Tradition Unix System, Modern Unix System, Linux. WS 2.7-2.10(pg.101-117)

Process Concept, Process State. WS 3.1-3.2(pg.131-147)

Process Description. WS 3.3 (pg.148-156)

Process Control, Execution of Operating System. WS 3.4-3.5 (pg.156-165)

Thread Concept Overview, Type of Threads. WS 4.1-4.2 (pg.177-189)

Multicore and Multi-threading, Multi-threading Models. WS 4.3 (pg.190-195)

Types of Processor Scheduling, CPU Scheduling Basic concept, Scheduling Criteria. WS 9.1(pg.426-429)

Scheduling Algorithms: FCFS, SJF. WS 9.2 (pg.430-451)

SRTF, Priority Scheduling. WS 9.2 (pg.430-451)

Round Robin , Highest Response Ratio Scheduling. WS 9.2 (pg.430-451)

Multilevel queue scheduling, Multilevel feedback queue scheduling. WS 9.2 (pg.430-451)

Traditional Unix scheduling. WS 9.3 (pg.450-454)

Process Synchronization: Background, Critical Section Problem. WS 5.1-5.2 (pg.224-240)

Mutual Exclusion, Software Approach: Dekker's, Peterson's algorithm. WS 5.1 (pg.224-240)

Mutual Exclusion: Hardware Support (compare and-swap, Exchange). WS 5.2 (pg.241-244)

Semaphore, Types of Semaphore, Semaphore Implementation. WS 5.4 (pg.244-250)

The Producer-Consumer Problem, Semaphore Solution to Bounded buffer Producer-Consumer Problem. WS 5.4 (pg.250-257)

Semaphore Solution to Reader Writers Problem (Readers have priority) WS 5.7 (pg.270-272)

Monitor, Monitor Solution to Bounded Buffer Producer-Consumer Problem. WS 5.5 (pg.257-261)

Message Passing, Solution to Reader Writer problem using Message Passing. WS 5.6-5.7(pg.263-270, 273-274)

Dining Philosopher Problem, Semaphore and Monitor Solution. WS 6.6 (pg.309-313)

Principles of Deadlocks: Resource Allocation Graph, Condition of Deadlock. WS 6.1 (pg.290-299)

Deadlock prevention, Deadlock Avoidance. WS 6.2-6.3 (pg.299-306)

Deadlock Avoidance Contd..... WS 6.3 (pg.300-306)

Deadlock Detection and Recovery. WS 6.4 (pg.306-308)

Memory Management requirements, Memory Partition. WS 7.1-7.2 (pg.340-345)

Memory Partition Contd..... WS 7.2 (pg.346-354)

Paging. WS 7.3 (pg.355-358)

Segmentation. WS 7.4 (pg.358-359)

Virtual Memory: Hardware and Control Structures. WS 8.1(pg.371-380)

Hardware and Control Structures Contd..... WS 8.1(pg.381-388)

Operating System Policy for Virtual Memory. WS 8.2 (pg.388-393)

Operating System Policy for Virtual Memory Contd.....WS 8.2 (pg.394-407)

I/O Devices, Organization of Input Output Function, I/O Buffering. WS 11.1-11.4(pg.506-516)

Disk scheduling. WS 11.5(pg.517-523)
